

# LIGULARIA BRITT-MARIE CRAWFORD PVR2449

## KEY FEATURES

- Discovered by the late Britt-Marie Crawford in her historic garden in Fife, Scotland
- One of the most outstanding and spectacular Ligularias to date
- Sculptural, rounded foliage emerges in mid-spring after a winter slumber
- Emerging foliage is intense mahogany-black with a discernable gloss
- Young leaves fade out to dark green as they mature, retaining their purple venation, undersides and stems
- Plant in groups for maximum impact from the fantastic textural and colour contrasts
- 0.6m x 0.6m
